

# BLUG/UBLG-Ingeokring's 2015 Engineering-Geological Excursion in the Eifel

March 21<sup>st</sup> and 22<sup>nd</sup> 2015

This year's topic is wear of rock cutting tools.

Feedback from the participants of last year showed that they:

- 1) could use the information about the rock formations studied in the Eifel for projects in similar formations.
- 2) liked to enhance their knowledge about assessing rock wear potential in the field.

Therefore the BLUG/UBLG-Ingeokring offers the possibility to study these rock formations in more detail and provides the requested information about wear in 2015.

Speakers from the mining, dredging, and petroleum industry will provide lectures about wear in their branch.

During a workshop session the participants will learn to assess wear potential by using a geologist's field equipment. The results will be compared with XRD-analysis of the same specimen.

Sophisticated equipment like the Cerchar testing equipment will be available on site.

*CPD-certificates will be issued.*

*Geological maps and geological field equipment can be acquired on site.*

**Location:** The historic city of Heimbach-Eifel (D52396, Germany).

**Participation fee:** 25 Euros per person (overnight stay, dinner and drinks are not included).

**The mineralogical analyses are sponsored by:**

**Programme:**

Sat., March 21<sup>st</sup> 2015, 11:00 - 19:00

Lectures and workshop

Sun., March 22<sup>nd</sup> 2015, 9:00 - 16:00

Geological site visits

If you are interested in participating send an e-mail to: [r.m.schmitz@tudelft.nl](mailto:r.m.schmitz@tudelft.nl) stating your name, address, and telephone number.

The deadline is 31.12.2014.

We will provide you with addresses for an overnight stay in the excursion area.
