SAND, The new Gold

12th of September @ Vlissingen

The population density in near shore areas increases steadily. These low lying areas with huge infrastructural development must be protected from the sea. What can we do to prepare us for the future? The Delta Works as best practice...

For the construction of major projects like tunnels, docks, the delta works, there is a need for million tonnes of marine aggregates. They need to be sourced, dredged, sieved and sorted according to the specifications and delivered to the specific sites.

We would like to invite you for our next site visit day on 12th of September, Vlissingen, The Netherlands

PROGRAMME

9h45 Welcome at the Deme Building Materials Site, Vlissingen

10h – 12h Visit of a **marine aggregate plant** + speaker

Lunch (if the weather allows at the strandbar, info will follow)

14h – 16h **Private Guided Visit** of the **Oosterscheldekering** on the geotechnical challenges encountered during the design and building of the storm surge barrier.

16h - ... Possibility for networking

Participation fee for the full programme including lunch is 50 euro for members and 75 euro for non-members.
